

HINDUSTAN COLLEGE OF SCIENCE AND TECHNOLOGY

A PROCESS DOCUMENT FOR OUTCOME BASED EDUCATION AND CO-PO-PSO ATTAINMENTS (2022-23)

1.0 INTRODUCTION TO OUTCOME BASED EDUCATION

The demand for standardized education systems and processes led to the widespread adoption of Outcome-Based Education (OBE) in many higher education institutions. This shift was driven by its endorsement as a recognized framework by both international and local academic accreditation bodies. India also embraced OBE in its higher technical education sector, with the National Assessment and Accreditation Council (NAAC) and the National Board of Accreditation (NBA) taking the lead in promoting global quality standards for technical education.

As of 2013, NBA exclusively accredited programs that adhered to the OBE approach, making it a mandatory requirement for institutions to implement outcome-based education approach.

According to William G. Spady Outcome-Based Education (OBE) advocates the importance of establishing a "clear picture of what is important for students to be able to do, then organizing the curriculum, instruction, and assessment to make sure that this learning ultimately happens."

The three most important premises of OBE are:

- 1. Decisions about what to teach should be driven by the outcome we would like students to exhibit at the end of their education experience
- 2. All students can achieve learning outcomes of significance so long as the condition necessary for their success are met
- 3. Accountability of schools and school systems should be in terms of student outcomes (referred as outputs) rather than in terms of what is provided by way of curriculum, hours of instruction, staff student ratios, school buildings, equipment or textbooks or support services (referred to as inputs)

The systems engineering model for the Outcome Based Education (OBE) as presented in Figure 1.0.1 along with its important steps in implementing the OBE. Some of the important activities involved in implementing the OBE include:

- 1. Creation of Institute Vision and Mission
- 2. Creation of Program Education Objectives (PEOs) for each of the programs offered by the institution
- 3. Development of Program Outcomes (POs) and Program Specific Outcomes (PSOs)
- 4. Curriculum Development, Course Design and Development of Course Outcomes (CO)
- 5. Mapping of COs with POs and PSOs
- 6. Development of Assessment strategy
- 7. Calculating the Attainments of the Course Outcomes (COs) for each course based on the Assessment strategy
- 8. Calculating the Overall Attainment of POs and PSOs
- 9. Evaluating the PEOs

Figure 1.0.1: Systems Engineering Process model for OBE

2.0 IMPLEMENTATION DETAILS OF OUTCOME BASED EDUCATION

Understanding the importance and relevance of outcome-based education, Hindustan College of Science and Technology (HCST), Farah-Mathura, established a culture that fosters continuous improvement and student-centric learning. This shift in educational philosophy not only benefits students but also enhances the overall effectiveness and relevance of the college's academic programs. Through the systematic implementation of OBE, Hindustan College of Science and Technology continues to thrive as a leading institution, contributing significantly to the advancement of technical education in India and beyond.

The systematic implementation details of Outcome Based Education model at Hindustan College of Science and Technology are presented below:

2.1 CREATION OF INSTITUTE VISION AND MISSION

Formulating a clear and compelling Vision and Mission statements for the institute sets the direction and purpose for the entire educational journey. By creating a strong Vision and Mission, the institute fosters a shared sense of purpose among all stakeholders, ensuring a unified focus on student-centred learning, continuous improvement, and the development of tangible learning outcome RADER ANDER ADDRESS THE ADDRESS THE INSTITUTE'S THE INSTITUTE'S THE ADDRESS THE INSTITUTE'S THE INSTITUT

Hindustan College of Science and Technology is the first educational institute established by Sharda Group of Institutions (SGI), Agra. The Vision and Mission statements of HCST are fully aligned with SGI Vision and Mission statements along with its value system.

Vision and Mission Statements of SGI are as follows:

SGI VISION:

• Sharda Educational Trust envisions an ambience of excellence, inspiring value - based education, research and development

SGI MISSION:

- Deliver quality education comparable with the best in its class.
- Train students with world-class competencies and cutting-edge proficiency to face challenges of global markets with confidence.
- Develop student's value sets and attitudes fora value based, fulfilling and a wholesome life.
- Create an effective interface with industry, business and community to make education responsive to changes relevant to needs.
- Absorb and to create through R&D, disseminate and help apply state of the art technologies & practices to social problems.
- Build top of the line faculty through appropriate human resource policies to achieve mission goals.

The Vision and Mission Statement exhibits the SGI's value system integrating five important characters such as

- Commitment and Integrity
- Respect for the Individual
- Team Work
- OInnovativeness and
- Excellence

The five value feathers of SGI are presented below in Figure 2.1.1.

Inheriting the SGI's value system, Hindustan College of Science and Technology developed its Vision and Mission statements aligning with SGI's Vision and Mission statements through a participatory process involving all the stakeholders and members of the Institute Advisory Committee.

Hindustan College of Science and Technology's Vision and Mission statements are as follows:

HCST VISION:

• HCST strives to impart a holistic knowledge-centric environment to serve humanity by providing research-oriented technical education to nurture global leaders and entrepreneurs.

HCST MISSION:

- Create an ecosystem to foster a culture of innovation, research, academic excellence, and entrepreneurship.
- Nurture technically competent and socially committed global leaders with high moral and ethical values.
- Impart outcome-based education to facilitate students for their holistic development.

Based on the HCST's Vision and Mission statements, the individual departments in the institute have created their respective departmental Vision and Mission statements through a participatory process involving different stakeholders, department professors, and members of the Program Advisory Committee (PAC) and Department Advisory Panel (DAP).

As an Example, the Computer Science and Engineering departmental Vison and Mission statements are presented below:

HCST-CSE VISION

• To be in the forefront of Computer Science and Engineering through academic excellence and research to successfully contribute to the country's nation-building initiatives, fostering ingenuity, values, and quality.

HCST-CSE MISSION

- To nurture brilliant engineers who are well-versed in both theory and practice in the field of basic sciences and Computer science and engineering
- To adopt a comprehensive strategy built on excellence, analytical ability, initiative, creativity, and innovation that guarantee computer science and engineering proficiency with a focus on interdisciplinary fields.
- To aid in nation building progress by responding to industry and societal demands by strengthening the economy via building socially relevant systems with prudence.
- Instil ethics and morals to develop work dignity and self-sacrifice to serve mankind.
- Provide Computer science and engineering students with an education centred upon well -defined outcomes in order to foster their holistic growth.
 RAJEEV KUMAR

UPADHYAY Location: your signing location here Date: 2023.09.06 16:51:264-0530 Extri Bharton DBC The HCST's Computer Science and Engineering departmental Vision and Mission creation process flow diagram is presented below in Figure 2.1.2.:

During the process of developing the departmental Vision and Mission statements, utmost importance is placed on ensuring a strong qualitative alignment between the Institute's Vision and Mission statements by all the departments of the institute.

2.2 CREATION OF PROGRAM EDUCATION OBJECTIVES (PEOs)

PEOs mainly depend upon the Goals, Mission and Vision statements of the department along with the inputs from all its stakeholders like parents, students, society, environment, regional, national interests and graduate attributes. In general, PEOs are broad statements that classifications are designed to attain after and within few years of graduation. PEOs are designed to attain after and within few years of graduation. PEOs are designed to attain after and within few years of graduation. PEOs are designed to attain after and within the institute.

A generic framework for designing PEOs presented below:

Figure 2.2.1: Generic framework for designing Program Education Objectives

During the process of developing the PEOs, utmost importance is placed on ensuring PEOs to have a strong qualitative correlation with the department's Mission statements.

The HCST's Computer Science and Engineering department's PEO development process flow diagram is presented below in Figure 2.2.2:

The PEOs for the BTech Computer Science and Engineering program are presented below:

- To provide foundational abilities in the basic sciences, analytical skills, and engineering basics to enable students to successfully develop an engineering and analytical mentality.
- To expose students broadly to the state-of-the-art in the field of computer science and engineering and to prepare them to conduct interdisciplinary research and to build socially relevant systems
- To encourage students to develop skills for lifelong learning, skills for being an innovator, entrepreneur and human values that will help them have to be a socially responsible individual and a successful career.

2.3 CREATION OF PROGRAM OUTCOMES (POs)

"Outcomes" are very different from "Objectives". Objectives are intended results or consequences of instruction, curricula, programs or activities, where as "Outcomes" are achieved results or consequences of what was learned, i.e., evidence that learning took place.

Program Outcomes are defined as the knowledge, skills, or behaviors that a student from a specific program should be able to demonstrate upon program completion.

The Program outcome statements should have the following characteristics:

- POs should be simple, distinctive and specific.
- POs should clearly indicate the level and type of competence that is required of graduates of a program.
- POs should identify program performance indicators
 - Areas/fields that are the focus of the assessment.
 - Knowledge, abilities, values and attitudes that a student in the program is expected to have.
 - Expected depth of the knowledge, abilities, values and attitudes.
- POs should map program performance indicators to Revised Blooms Taxonomy
- POs should be traceable to PEOs

Washington Accord's Program Outcomes are the guidelines for representing generic Program Outcomes for majority of internationally recognized Engineering and Management programs.

Hindustan College of Science and Technology (HCST) is affiliated with Dr. A.P.J Abdul Kalam Technical University (AKTU), Lucknow, and follows the curriculum prescribed by AKTU. AKTU aligned all their programs with the standard Washington Accord's 12 Program Outcomes. Following AKTU guidelines, HCST aligned all the professional engineering and management courses with the standard 12 generic Program outcomes prescribed by the Washington Accord.

The twelve Washington Accord's Program Outcomes are as follows: RAJEEV KUMAR UPADHYAY KUMAR UPAD

- PO-1: Engineering Knowledge Ability to apply knowledge of mathematics, science, mechanical engineering fundamentals and specialization to the solutions of complex engineering problems;
- PO-2: Problem Analysis Ability to identify, formulate, conduct research literature and analyze complex engineering problems using principles of mathematics, natural sciences and mechanical engineering sciences;
- PO-3: Design/Development of Solutions Ability to design mechanical solutions for complex engineering problems and systems, components or processes that meet specified needs;
- PO-4: Investigation Ability to conduct investigation of complex problems using researchbased knowledge and research methods to provide valid conclusions;
- PO-5: Modern Tools: Ability to develop and apply appropriate techniques, resources, and innovative engineering tools to complex mechanical engineering activities;
- PO-6: The Engineer and Society Ability to apply contextual knowledge to assess societal, health, safety, legal and cultural issues with the awareness of the consequent responsibilities to professional mechanical engineering practice for the betterment of society;
- PO-7: Environment and Sustainability Ability to understand the impact of professional mechanical engineering solutions in societal, economic and environmental contexts and demonstrate knowledge of and need for sustainable development;
- PO-8: Ethics Ability to apply ethical principles and demonstrate commitment to professional ethics, responsibilities and norms of mechanical engineering practice;
- PO-9: Communication Ability to communicate effectively on complex engineering activities with the engineering community and with society at large;
- PO-10: Individual and Team Work Ability to demonstrate knowledge and understanding of mechanical engineering and management principles and apply these effectively as an individual, a member or a leader in diverse teams and in multidisciplinary settings;
- PO-11: Project Management and Finance Ability to demonstrate knowledge and understanding of project management, finance principles, business development within the scope of mechanical engineering practices.
- PO-12: Life Long Learning Ability to recognize the need for, a RANEETA ability to engage in independent and life-long learning ikuMAR technological change in mechanical engineering practice UPADHYAY

From the below Figure 2.3.1 we can observe that, all the POs are categorized into four dimensions such as Academic, Professional skills, Values and Ethics, and Social Sensibilities.

Figure 2.3.1: Dimensions of Program outcomes

Every PO should describe the competency that a student can demonstrate after going through the learning experience and completing the program. In general, competency is a general statement that describes the desired knowledge, skills, and behaviours of a student graduating from a program (or completing a course). Competencies are obtained or developed during the process of learning by the student/learner. Competencies represent a dynamic combination of knowledge, understanding, skills and abilities implied by a program outcome statement. Fostering competences is the object of educational program initiatives. Actual competencies will be formed in various course units and assessed at different stages.

In general, a POs should clearly indicate the level and type of competence that is to be achieved by the graduates of the program and a every competency should identify program performance indicators which describes the areas/fields that are the focus of the assessment and expected depth of Knowledge, abilities, values and attitudes that a student in the program is expected to have. The correlation between the Program Outcome, Competency and performance indicators is represented in below Figure 2.3.2.

The Competencies and their associated performance indicators for each of the twelve program outcomes are well represented in Washington Accord's Program Outcome models. For depiction and better understanding, PO-2: Problem Analysis's Competencies and their associated performance indicators are presented in the table 2.3.1

We can observe from the table 2.3.1 that, the performance indicators clearly describe a key verb that describe the level of performance that needs to be exhibited by the graduating student to demonstrate the competency and to achieve the desired outcome.

| | Competency | Performance Indicators |
|-----|---|---|
| 2.1 | Demonstrate an ability to | Articulate problem statements and identify objectives |
| | identify and formulate | Identify engineering systems, variables, and parameters to solve the problems |
| | complex engineering problem | Identify the mathematical, engineering and other relevant knowledge that applies to a given problem |
| 2.2 | Demonstrate an ability to formulate a solution plan and | Reframe complex problems into interconnected sub problems identify, assemble and evaluate information and resources. |
| | methodology for an engineering problem | Identify existing processes/solution methods for solving the problem, including forming justified approximations and assumptions |
| | | Compare and contrast alternative solution processes to select the best process. |
| 2.3 | Demonstrate an ability to formulate and interpret a model | Combine scientific principles and engineering concepts to formulate model/s (mathematical or otherwise) of a system or process that is appropriate in terms of applicability and required accuracy. |
| | | Identify assumptions (mathematical and physical) necessary to allow modeling of a system at the level of accuracy required. |
| 2.4 | Demonstrate an ability to | Apply engineering mathematics and computations to solve mathematical models |
| | execute a solution process and analyze results | Produce and validate results through skilful use of contemporary engineering tools and Differentiate models and generate new models. |
| | | Identify sources of error in the solution process, and limitations of the solution |
| | | Extract desired understanding and conclusions consistent with objectives and limitations of the analysis |

PO 2: Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences

Figure 2.3.1: PO-2: Competencies and their associated performance indicators

Performance indicators can utilize the revised Bloom's Taxonomy to indicate at what revised Bloom's taxonomy level the student is expected to perform. Revised Bloom's taxonomy describes levels of thinking skills. It represents 6 levels of thinking abilities as presented in the figure 2.3.3.

The bottom three levels are represented as Lower order thinking skills and upper three levels represent higher order thinking skills. The sample list of action words that can be used when creating the expected student learning outcomes related to critical KUMAR UPADHYA KUMAR UPADHY

Figure 2.3.3: Revised Bloom's Taxonomy levels

| Lowe | r Order of Thinkin | ng (LOT) | Higher Order of Thinking (HOT) | | | | |
|----------|--------------------|-------------|--------------------------------|-----------|-----------|--|--|
| Remember | Understand | Apply | Analyze | Evaluate | Create | | |
| Define | Explain | Solve | Analyse | Reframe | Design | | |

| Label | Express | Choose | Conclude | Evaluate | Produce | | |
| Choose | Illustrate | Make use of | Discover | Choose | Compile | | |

Table 2.3.2: Revised Bloom's Taxonomy keywords based on the levels

We can observe from the table 2.3.1 that, the keywords used in the performance indicator section help us to understand which revised Bloom's taxonomy level the student should demonstrate his/her competency. Integrating the revised Bloom's taxonomy level, we can demonstrate the seamless integration between the program outcome, competency, performance indicators and revised Bloom's taxonomy level as shown in the Table 2.3.3.

2.3.1 CREATION OF PROGRAM SPECIFIC OUTCOMES (PSOs)

Washington Accord's 12 generic Program Outcomes are the guidelines for representing Program Outcomes for majority of internationally recognized Engineering and Management programs. It is mandatory to have these 12 Program Outcomes to be achieved by any program to be recognized by the international bodies. To bring the flexibility, OBE model provides an opportunity to add more program outcomes specific to that program. These additional program outcomes are referred as Program Specific Outcomes (PSO). Generally, 2 to 4 Program Specific Outcomes (PSOs) could be created that demonstrate the program's focus and uniqueness.

Example of PSOs created by the HCST – CSE Department are presented below:

- Capability to design and develop effective technological solutions for complex business challenges, making use of the appropriate data structures, algorithms and database systems.
- The capacity to apply fundamental computing skills as well as contemporary computer programming languages and environments to build innovative research projects for the benefit of a social cause.
- The capacity to understand and implement software engineering process models, software design principles, and software project management methodologies in order to ensure the successful implementation of software projects.

2.4 CURRICULUM DEVELOPMENT, COURSE DESIGN and COURSE OUTCOMES (CO)

Program outcomes characterize Student's cumulative learning across courses at the end of the program, whereas Course outcomes identify "the ingredients" that make up the program. CO provides the Incremental knowledge and skills that students develop bit by bit throughout the program aligned with. While developing the course outcomes, it is at most important to keep the outcome statements to simple, achievable, measurable, realistic and timebound.

Once the Program outcomes are designed, aligning to the program outcomes, program competencies and program performance indicators, the course curriculum is designed followed by course objectives, Course outcomes, course competencies and course performance indicators. The overall integration is depicted table 2.4.1.

As Hindustan College of Science and Technology (HCST) is affiliated with Dr. A.P.J Abdul Kalam Technical University (AKTU), Lucknow, and follows the curriculum prescribed by AKTU. AKTU predefines the courses for each program and shares the planned Course Outcomes and their performance indicators using revised Bloom's taxonomy levels for most of the courses to bring the uniformity across all the affiliated institutions. Wherever the courses are assigned with well-defined Course Outcomes by the AKTU, HCST team will use the defined Course Outcomes. In case, for any specific program where Course Outcomes are not designed, the HCST team will design the Course Outcomes using the process defined by the departmental advisory committee.

As an example, a well-defined course outcome along with its performance indicator levels for a BTech Computer Science and Engineering course from AKTU is presented below in table 2.4.2.

OPERATING SYSTEMS (KCS - 401)

Course Outcomes (COs):

| CO No. | Statement of Course Outcome | Bloom's Knowledge Level |
|-----------|--|-------------------------------|
| After con | npletion of the course, the student will be able to | |
| CO1 | Understand and classify operating systems based on their functions and list the components of an operating system. | K2 |
| CO2 | Understand concurrent processes and demonstrate how to solve classical problems in concurrency using synchronization mechanisms. | K3 |
| CO3 | Analyze and Evaluate CPU scheduling algorithms, analyze their performance criteria, and describe deadlock prevention, detection, and recovery mechanisms. | K2, K4 |
| CO4 | Understand and assess memory management techniques and discuss virtual memory concepts, and solve problems related to paging, segmentation, and page replacement algorithms. | K2, K3 |
| CO5 | Understand I/O management techniques, compare different disk scheduling algorithms, and discuss file system organization, implementation, and security. | K2, K4 |

Table 2.4.2: Course Outcomes and associated Blooms Taxonomy levels

2.5 MAPPING OF COs WITH POS AND PSOs

As we have seen from the OBE systems engineering process flow diagram presented in figure 1.0.1, the assessments are performed at the course level and the Course outcomes are measured. To compute the Program Outcomes, the Course Outcomes have to be mapped to Program Outcomes. Mapping of the Program Outcomes with the Course Outcomes is one of important steps in implementing the OBE.

A course outcome (CO) can be mapped one or many program outcomes and the association and the degree of correlation between the Course Outcome and the Program Outcome needs to be specified. The correlation can be "LOW", "MEDIUM" or "HIGH". For ease of computation, the above correlations are represented in numeric as 1, 2 and 3 respectively. If there is no correlation between CO and PO a '-' may be used to represent the same.

Very similar to CO-PO mapping, the correlation between the COs and the Program Specific Outcome (PSOs) are also mapped.

A sample CO-PO and PSO correlation mapping is presented below in KUMAR UPADHYAY

| | | | | | HIND | USTAN COL INFOR | LEGE OF S MATION 2021 | CIENCE & T TECHNOLOG -22 | ECHNOLOG IY | A | | | | | |

Table 2.5.1: CO-PO-PSO Mapping

The CO-PO-PSO mapping is to be documented by the subject teacher with proper justification and the mapping document should be reviewed by the course coordinator and approved by the departmental advisory panel. An example of CO-PO and CO-PSO Mapping justifications are presented below in table 2.5.2 and 2.5.3 respectively:

CO-PO Mapping Justification:

| lutcome | Mapping Justification |
|---------|--|
| | PO1: Strongly mapped as the students will be able to gain foundational concepts of OS and their types. |
| | PO2: Moderately mapped as the students will be able to identify the types of O5 and will be able to suggest problems associated with particular O5 and how to solve it. |
| CO1 | PO3: Moderately mapped as the students will be to develop engineering based solutions related to O5. |
| | PO10: Moderately mapped as the students will be able to communication about the types of DS and Kernels along with the problems associated with them. |
| | PO12: Strongly mapped looking at the understanding of OS in current scenario, it will a life long learning for students. |
| | PO1: Strongly mapped as the students will be able to gain the basic idea of concurrent processes. |
| | PO2: Strongly mapped as the students will be able to identify the problems related to concurrent processes in OS and their solutions. |
| C07 | PO3: Moderately mapped as the students will be able to solve real life problems such as producer consumer problem, dining philosophers types of issues. |
| CU2 | PO4: Weakly mapped as the students will be able to try and conduct investigations related to problems related to O5. |
| | PO10: Weakly mapped as the students will be able to communicate the issues related to 05 process synchronization at: |
| | PO12: Strongly mapped as it will a life long learning for students. |
| | PO1: Strongly mapped as the students will be able to gain the idea of CPU scheduling algorithms and deadlock. |
| C03 | PO2: Strongly mapped as the students will be able to identify the problems related to CPU scheduling and deadlocks along with their resolutions. |
| | PO3: Strongly mapped as the students will be able to solve real life problems such as deadlocks in O5. |
| | PO4: Strongly mapped as the students will be able to conduct investigations related to problems related to CPU scheduling and Deadlocks such as the factors and conditions related to them. |
| | PO10: Moderately mapped as the students will be able to communicate the problems and conditions related to CPU scheduling algorithms such as SCIS_SIE_Priority and Pound Bobin Scheduling and Bankers Algorithm. |
| | PO12: Strongly mapped as it will a life long learning for students due to their use in real life scenarios. |
| | PO1: Strongly mapped as the students will be able to gain the idea of memory management schemes. |
| | PO2: Strongly mapped as the students will be able to identify the problems related to memory management such as fragmentation, thrashing etc. |
| | PO3: Moderately mapped as the students will be able to solve real life problems related to paging, segmentation and virtual memory etc. |
| | PO4: Strongly mapped as the students will be able to conduct investigations related to MFT, MVT, paging, segmentation, and virtual memory. |
| 0.04 | POB: Weakly mapped as students will get the idea about the use of memory in an ethical way because it is dealing with memory allocation techniceae which may have some conservations. |
| | POID: Moderately mapped as the students will be able to communicate the issue related with each of the memory management schemes in afficient way. |
| | PO12: Strongly mapped as it will a life long learning for students due to the uses of memory concept in almost all areas related to programming. |
| | PO1: Strongly mapped as the students will be able to gain the idea of disk scheduling in depth. |
| | PO2: Moderately mapped as the students will be able to identify the problems related to disk scheduling schemes such as FCPS, SSTF etc. PO3: Strongly mapped as the students will be able to solve real life problems related to disk scheduling in minimum time as possible. |
| C05 | PO4: Moderately mapped as the students will be able to conduct investigations related disk management strategies, file handling techniques etc. |
| | POB: Moderately mapped as students will get the idea about the use of files, and directory management schemes. Also it deals with security mechanisms related to disks. |
| | PO10: Weakly mapped as the students will be able to communicate the issue related OS file systems. |
| | BO12: Strongth magnet as it will a life load baching for students due to the uses of disk. Elec and aposite middle AAA D SERVICES |

Table 2.5.2: CO-PO-Justification

CO-PSO Mapping Justification

| Course Outcome | CO-PSO Mapping Justification |
|-------------------|--|
| | PSD1: Strongly mapped as the students will be able to get latest knowldege related to types of OS and will be able to understand real world issues. |
| 01 | PSO2: Strongly mapped as the students will be able to use their communication skills while learning and will be able to understand how OS is used for problem solving. |
| | PSO1: Strongly mapped as the students will be able to learn new skills to understand topics such as critical sections, semaphores etc. |
| COZ | PSD2: Strongly mapped as the students will be able to use their critical thinking and problem solving skills to solve issue related to process synchronization. |
| | PSO1: Strongly mapped as the students will be able to get the idea of latest algorithms used in CPU scheduling and how OS deals with deadlocks. |
| 0.03 | PSO2: Strongly mapped as the students will be able to use their problem solving skills along with critical thinking to find the solutions of problems related to CPU scheduling and deadlocks. |
| | PSO1: Strongly mapped as the students will be able to learn latest techniques used in memory managament in OS such virtual memory, buddy systems etc. |
| 04 | PSO2: Strongly mapped as the students will be able to use their critical thinking and problem solving to solve issue related to MFT, MVT, paging, segmentation etc. |
| 005 | PSD1: Strongly mapped as the students will be able to learn latest techniques used in file management, file allocation techniques and storage techniques such as RAID. |
| cos | PSO2: Strongly mapped as the students will be able to use their critical thinking and problem solving to solve issue related to file allocations, disk scheduling schemes, and security mechanisms. |

Table 2.5.3: CO-PSO-Justification

2.6 DEVELOPMENT OF ASSESSMENT STRATEGY AND EVALUTION

HCST follows AKTU's assessment strategy for implementing the student's continuous internal assessment and external university assessment. For each of the assessments, the institute's academic process framework is followed. A self-explanatory assessment strategy for Theory courses are presented below in figure 2.6.1 and in table 2.6.1, the correlation of every assessment with Course Outcomes is presented.

Start of End of the Sem the Sem Assig Assignment Assign Assignment Approx Approx Approx Approx 10th Week 14th Week 5th Week 14th Week Class Class Class End Test 1 Test 2 Test 3 Sem External 70% Continuous Internal Assessment 30 % Week, Mediocre, High Performing Student Identification and appropriate interventions are provided

The Assessment plan for Theory course:

The below described table presents a generic high-level guideline for RADE VINANCE VIN

teacher can make necessary modifications with the approval of the concerned head of the department.

| , | | | | | | | |
|--------------------------|-----|-----|-----|-----|-----|--|--|
| Internal Assessment | CO1 | CO2 | CO3 | CO4 | CO5 | | |
| Class Test1 | х | х | | | | | |
| Class Test2 | | х | x | | | | |
| Class Test3 (PUT) | x | х | x | х | x | | |
| Class Test (Best 2 of 3) | | | | | | | |
| Class Assignment | х | х | х | х | x | | |
| Attendance | X | х | х | х | x | | |

Assessment of Theory Courses

For the successful implementation of the assessment strategy, HCST has implemented two important initiatives.

- 1. The internal class test question papers are prepared with COs and revised Bloom's taxonomy level
 - The template of the model question paper is attached as the Appendix-2
- 2. The recorded marks in the answer sheet are well documented based on COs
 - The template of the first page of the answer sheet to record the marks is attached as the Appendix-3

Similar to the Theory course, a self-explanatory Laboratory Assessment plan is presented below in figure 2.6.2

 Week, Mediocre, High Performing
 Student Identification and appropriate interventions are provided

Figure 2.6.2: Assessment Strategy (Lab)

A generic high-level guideline for mapping of laboratory course's in RAJEES the COs as per the AKTU university guidelines is presented below in the AKTU university guidelines is presented below in the AKTU university courses, the prescribe UPADHYAY to know the course of the laboratory courses, the prescribe UPADHYAY to the course of the laboratory courses of the prescribe UPADHYAY to the course of the laboratory courses of the prescribe UPADHYAY to the course of the laboratory courses of the prescribe UPADHYAY to the course of the laboratory courses of the prescribe UPADHYAY to the course of the course of the laboratory courses of the prescribe UPADHYAY to the course of the cour

Table 2.6.1: Assessment type and its correlation with Course Outcomes (Theory)

limited to eight, whereas in some other courses it is prescribed more than 10 experiments. The subject teacher can make necessary modifications with the approval of the concerned head of the department.

| Assessment of Flactical Course | | | | | | | |

Table 2.6.2: Assessment type and its correlation with Course Outcomes (Lab)

On the same lines, for the courses related to projects and internships internal and external assessment strategies are followed as per the AKTU's guidelines.

2.7 ATTAINMENT OF COURSE OUTCOMES

The calculation of Course Outcome is a structured process. HCST follows a 12 steps process for calculating the Course Outcomes. The steps are as follows:

- Step1: Define Internal and external course attainment level criteria
- Step2: Define Direct assessment ratio (Internal Vs External)
- Step3: Define Overall Direct and Indirect Attainment ratio
- Step 4: Define the marks for each of the assessment criteria and Course Outcome
- Step 5: Use of standardised tool
- Step 6: Enter the Course level basic information
- Step 7: Enter the Marks at CO level
- Step 8: Compute the Direct Internal assessment marks attainment
- Step 9: Compute the Direct External assessment marks attainment
- Step 10: Compute overall Direct attainment
- Step 11: Overall Attainment of the Course Outcomes
- Step 12: Compute POs attainment of the course

Each of the above steps are explained below in detail.

Step1: Define Internal and external course attainment level criteria:

Departmental internal review committee reviews the draft attainment level criteria for each of the courses created by the subject teacher/course coordinator and moderates as per the requirement and approves the respective subject attainment level criteria. The below table 2.7.1 describes the subject level CO attainment level criteria for a subject.

| INTERNAL ATTAINMENT GUIDELINES | | | | | | |
|--------------------------------|-------|------------------|--|--|--|--|
| CRITERIA | MARKS | ATTAINMENT LEVEL | | | | |
| LESS THAN | 40 | 0 | | | | |
| >40 & LESS THAN | 60 | 1 | | | | |
| >60 & LESS THAN | 80 | 2 | | | | |
| GREATER THAN | 80 | 3 | | | | |

| EXTERNAL ATTAINMENT GUIDELINES | | | | | | | |
|--------------------------------|----|---|--|--|--|--|--|
| CRITERIA MARKS ATTAINMENT LE | | | | | | | |
| LESS THAN | 40 | 0 | | | | | |
| >40 & LESS THAN | 50 | 1 | | | | | |
| >50 & LESS THAN | 65 | 2 | | | | | |
| GREATER THAN | 65 | 3 | | | | | |

Table 2.7.1: Course level internal and external attainment level criteria

Step2: Define Direct assessment ratios (Internal Vs External)

Based on the institute academic policy, define Direct (Direct Internal Assessment and External Assessment) attainment level. As HCST is affiliated to AKTU. AKTU has a well-defined policy for internal and external assessment policy for each course type. HCST will observe the AKTU's policy in defining the direct attainment ratio as presented in table 2.7.2.

| | l. | DIRECT ATT | AINMENT | RATIO | |
|----------|--------|------------|----------|---------------|---------------|
| CRITERIA | THEORY | LAB | NTERNSHI | 7-SEM PROJECT | 8-SEM PROJECT |
| INTERNAL | 30% | 50% | 100% | 100% | 25% |
| EXTERNAL | 70% | 50% | 0% | 0% | 75% |

Table 2.7.2: Direct attainment Ratios – Internal Vs External

Step3: Define Overall Direct and Indirect Attainment ratio

As per the institute guidelines, institute can decide on the direct and indirect attainment percentages. In general NBA guidelines suggest direct vs indirect can be 80:20 as shown in table 2.7.3. But this can be moderated to 90:10 or 70:30 depending upon the institute guidelines.

| DIRECT AND INDIRECT | ATTAINMENT |
|---------------------|------------|
| CRITERIA | PERCENTAGE |
| DIRECT | 80% |
| INDIRECT | 20% |

Table 2.7.3: Direct Vs Indirect attainment ratio

Step 4: Define the marks for each of the assessment criteria and Course Outcome

As per the AKTU guidelines, HCST allocates the internal marks in the followin RAUEEV

1. 30 Marks for Internal Subjective Test (CT1, CT2 and CT3)

- a. Equally dividing the 30 Marks into number of COs identified for the course.
- b. As the number of COs designed by AKTU for each subject is 5, each CO carries 6 Marks
- c. A deviation of about 10% marks variation between the COs can be considered after the approval from the HOD.
- 2. 10 Marks for Additional Assignment
 - a. Equally dividing the 10 Marks into number of COs identified for the course.
 - b. As the number of COs designed by AKTU for each subject is 5, each CO carries 2 Marks
- 3. 10 Marks for Classroom Attendance
 - a. Equally dividing the 10 Marks into number of COs identified for the course.
 - b. As the number of COs designed by AKTU for each subject is 5, each CO carries 2 Marks

Step 5: Use of standardised tool

For computing the Course outcomes for each of the subject, HCST has designed a standard spread sheet with relevant details to automatically computing the COs given the input continuous assessment marks. The details of the template can be observed in Step 7 through Step 12.

Step 6: Enter the Course level basic information

In the first sheet the following details are entered:

- CO-PO-PSO Mapping and the system computes weighted average of each PO's impact for all the COs
- CO-PO-PSO Mapping Justification
- Define Benchmarks discussed in Step 1 through Step 4 (This information will be used in other sheets)
 - Define Internal assessment attainment benchmark level
 - Define External assessment attainment benchmark level
 - Define Direct attainment (internal vs external) percentage
 - Overall Direct and Indirect attainment ratio

Step 7: Enter the Marks obtained at CO level:

The following details are entered in the second sheet

- Enter the student roll numbers enrolled into the subject
- Enter the Class test marks by CO
- Enter the Class Additional Assessment marks (Class Assignment + Attendance) by CO
- Enter the Informal Feedback Attainment (Appendix -1)
- Enter the External Marks

The informal attainment form provides the teaching staff on the actual understanding of the subject by the student in each of the Course outcomes from CO1 to CO5. The informal attainment feedback is advised to collect from each student after every CO course completion. Informal attainment feedback form is included as an Appendix-1 at the end of the document. Though it is advised to take the informal attainment feedback after completion **FAYEEV** demonstration, the informal attainment feedback form contains all the CONTRACT of the informal attainment feedback form contains all the CONTRACT of the informal attainment feedback form contains all the CONTRACT of the informal attainment feedback form contains all the CONTRACT of the informal attainment feedback form contains all the CONTRACT of the informal attainment feedback form contains all the CONTRACT of the informal attainment feedback form contains all the CONTRACT of the information of the document is a contract of the informal attainment feedback form contains all the CONTRACT of the information of the document is a contract of the information of the informal attainment feedback form contains all the CONTRACT of the information of the document is a contract of the information of the information

The actual data sheet is attached below for better understanding. The overall internal marks (CT+TA+AT) are automatically computed as shown in the table 2.7.4 .

| | cr | MAR | 15 01 | IR OF | 50 | | TA+ | ATN | LARKS | ġ. | 0 | verall (C1 | inter +TA+ | al Ma AT] | ria | lotal CT | otalTA | d Internal | 100 | STUDENT | FEEDBACK DIVIDE B | on the BJ Qually IN | ASIS OF PEI ALL CO'S | CENTAGE | University Exem Marka |

Table 2.7.4: Template for entering the Internal Marks, External Marks and the Informal Attainment

Step 8: Compute the Direct Internal assessment marks attainment

In this step, the internal marks computed in Step 7 are converted into its respective percentages and based on the internal attainment guidelines, the internal (Direct) attainment is computed as shown the below table 2.7.5.

| | | | | | | | | | | IP. | TERN | AL ATTA | INMEN | T GUIDE | LINES |
|-----|---------------------------------------|-------|------|-----|-------|-----------------------|--------------|-----------------|--------------|-----|------|-----------|---------|-----------|-------|

Table 2.7.5: Template for computing internal direct Attainment

Step 9: Compute the Direct External assessment marks attainment

In this step, the external marks recorded in the previous sheet is reflected. The external marks from AKTU are not presented based on the COs. They are just presented based on 100 marks. In this step, we calculate the overall percentage of marks scored by the RAJERY we use the same percentage in each of the COs identified. Once HAMARA distributed across all the COs, the Direct external attainment for all HEADHYAY. External attainment guidelines presented. The details of the direct external attainment calculations are shown in the table below 2.7.6.

Table 2.7.6: Template for computing External direct Attainment

Step 10: Compute overall Direct attainment

The overall Direct attainment is computed by consolidating the direct internal attainment and the direct external attainment based on the direct attainment ratio presented before. For all the AKTU theory courses, 30% direct internal attainment is considered and 70% direct external attainment is considered for computing the overall direct attainment.

Overall Direct attainment = 30% Internal direct attainment + 70% external direct attainment

The overall direct attainment computation is presented in the table 2.7.7 below:

| INTER | NAL ATT | AINME | NT GUI | DELINES | | | | | | EXTERNAL | ATT | UNM | NT G | UIDE | LINES | DIRE | CT ATT | AINN | IENT P | RATIO |

| 1.00 | 2 | 2 | 2 | 2 | 64 | 64 | 64 | 64 | 64 | 64 | 3 | 3 | 3 | 3 | 3 | 2.7 | 2.7 | 27 | 2.7 | 2.7 |
| 2 | | 24 | 3 | 2.20 | 41 | 41 | 245 | 41 | 41 | 41 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |

Step 11: Overall Attainment of the Course Outcomes

The overall attainment of the Course Outcomes is computed by consolidating the informal (indirect) attainment obtained from the student informal feedback forms recorded earlier in step 7 and the overall direct attainment computed in the previous step 10. The consolidation is based on the overall attainment ratio defined earlier. In this case, 80% overall direct attainment and 20% informal attainment is considered.

Overall Attainment = 80% overall direct attainment + 20% of informal (Indirect) attainment

The overall attainment computation is presented in the table 2.7.8 below:

| DIRE | CT AT | AINM | IENT I | ATIO | | | | | OVE | ALL / | ATTAI | NME | NT R/ | TIO |

Table 2.7.9: Template for Overall Course Outcomes attainment

From the above table 2.7.9 we can see that, the average attainment of all the COs is 2.066.

Step 12: Compute POs attainment of the course

After computing the average course outcome attainment, each impacted PO's and PSO's attainments are computed using the below formulae:

PO attainment =

[(Weighted average value of the PO * Average attainment value of CO) / Maximum attainment value (3 in this case)]

PSO attainment =

[(Weighted average value of the PSO * Average attainment value of CO) / Maximum attainment value (3 in this case)]

The Calculated PO Attainments are represented in the table 2.7.10 along with the visualization graph in figure 2.7.1 and the overall computed PSO attainments are presented in table 2.7.11 and the respective visualization is presented in figure 2.7.2.

| AVERAGE CO ATT | AINMENT | 2.066 |
|----------------|---------------------------|-------------|
| PROGRAM | PO WEIGHTED AVERAGE | OVERALL PO |
| PO1 | 3 | 2.066 |
| PO2 | 2.6 | 1.790533333 |
| PO3 | 2.4 | 1.6528 |

Table 2.7.12: Overall Attainment Vs Planned

Once we identify the difference between the weighted average of the PO/PSO values and the computed PO/PSO attainment values, it is important of understand and deliberate on why this variance is observed and what corrective actions needs to be explored to minimize the difference between the weighted average of the PO/PSO values and the computed PO/PSO attainment values.

The corrective measures can be recorded in the below format presented in table 2.7.13. The action plan can be referred and communicated back to the management for necessary steps to be considered when this subject is taught next time.

| | | Evaluation of F | O Attainment |
|---------------------------------|----------------------------|---------------------------|---|

Table 2.7.13: Template for defining the action plan for deviation of panned vs attained PO-PSO attainments

2.8 ATTAINMENT OF OVERALL PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

Once the Course Outcomes of all the courses are calculated, the overall Program Outcomes and

Program Specific Outcomes can be computed using the following stersAJEEV

Step 1: Consolidate all the POs weighted average of all the courses

ter RAJEEV KUMAR S KUMAR UPADHYAY UPADHYAY UPADHYAY District Carlo, Co-Personal, PostalCode-322001, S-Utar Prodech, 3282107, A0009780-4 SENARWAGEN-83282710C-3409247840-SENARWAGENARWAGENARWAGEN-832847840-SENARWAGENARWAGEN-842847840As an example, the list of courses and their associated PO and PSO weighted averages computed for each course for the BTech in Information Technology Program for the batch 2019-2023 has been presented below in table 2.8.1. The total of 58 number of courses are offered to the students in four-year BTech program and the overall weighted average of all these 58 course's POs and PSOs are further calculated.

| UDEPARTMENT OF INFORMATION TECHNOLOGY VEIGHTED AVERAGE OF CO-PO Mapping (2012-33 Batch) ESSION Math 1001 Po2 [Po1 [Po1 PO1 PO1 PO1 PO1 PO1 PO1 PO1 PO1 PO1 PO | | | | | HINDUSTAN COLLEG | E OF | SCIE | NCE | & TE | CHN | IOLO | IGY | | | | | | | | |

Table 2.8.1: PO and PSO (planned) weighted averages computed for - BTech In Fort Plance 2023/0.08 ftes 14140530

Step 2: Obtain the attainment values for PO and PSO of all the courses – (referred as Direct PO/PSO Attainment)

For all the 58 courses, consolidate the PO and PSO attainments achieved by each course and calculate the overall weighted average of all the POs and PSOs.

As an example, the list of courses and their associated PO and PSO attainments and their overall weighted averages are calculated for the BTech in Information Technology Program for 2019-2023 batch has been presented in table 2.8.2

Step 3: Obtain informal attainment from the final year students on the PO and PSO criteria and compute the average attainment at each PO and PSO level

Formula: Average PO/PSO informal attainment = (L1*no of students + L2 * no of students + L3 * no of students)/ total No of students

As an example, the informal attainment perceived by the BTech Information Technology program's final year students are recorded and the average as calculated as shown in the below table 2.8.3:

| 1 | | | | HINDU: D INFO | STAN CO EPARTM RMAL PO | OLLEG ENT OF 0 & PSO | E OF SC INFORM ATTAIN | TENCE ATION T MENT (B | & TEC ECHNOL ATCH: 2 | HNOL() .0GY 019-2023) | οGΥ | | | | | | |

Table 2.8.3: Informal Attainment of BTech Final Year Students on PO-PSO

Step 4: Compute Overall Attainment using the Overall Attainment ratio

The overall attainment integrating direct and informal attainment is calculated using the below formula and is presented in the table 2.8.4.

Formula:

```
Overall PO/PSO attainment =
```

(80% Direct PO/PSO Attainment + 20% Informal (Indirect) PO/PSO Attainment)

| OVERALL ATTAINMENT CALCULATIONS | | | | | | | | | | | | | | | |
|---------------------------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|------------|----------|------------------------------------|--|
| Direct/Indirect Attainment | P01 | P02 | P03 | P04 | P05 | P06 | P07 | P08 | P09 | P010 | P011 | P012 | PS01 | PSO2 | P503 |
| Direct Attainment | 1.772705 | 1.843337 | 1.795447 | 1.623052 | 1.610992 | 1.040514 | 1.190785 | 1.360435 | 1.208574 | 1.317994 | 1.39875 | 1,711647 | 1.610683 | 1.510238 | 1.59 |

| | | | | | | | | | | | | | | | |
| 80% of the Direct Attainment | 1.418164 | 1.47467 | 1.436358 | 1,298442 | 1.288794 | 0.832411 | 0.952628 | 1.088348 | 0.966859 | 1.054396 | 1.119 | 1.369318 | 1.288546 | 1.20819 | 1.272 |
| 20% of the Informal Attainment | 0.542857 | 0.571429 | 0.542857 | 0.485714 | 0.542857 | 0.314286 | 0.314286 | 0.514286 | 0.542857 | 0.542857 | 0.485 | AJE | ΕX | Digita DN: C S=Utta SERIA | y signed by Rr =IN, O=Person ir Pradesh, LNUMBER=A/ |
| Overall Attainment | 1.961021 | 2.046099 | 1.979215 | 1.784156 | 1.831651 | 1.146697 | 1.266914 | 1.602634 | 1.509717 | 1.597253 | 1.604714 | UM, | AR | F2B07 EE03E Reaso | E25E09D7F5 I9A3, CN=RAJ n: I and the aut |

After computing the overall attainments, compare the achieved POs and PSOs attainment values with the planned attainment values and document the plan of action to improve the attainment levels for the program as presented in table 2.8.5 and its comprehensive visualization is presented in figure 2.8.1

| Planned Attainment | 2,39 | 2.42 | 2.40 | 2.00 | 2.07 | 1.43 | 1.70 | 1.80 | 1.68 | 1.78 | 1.80 | 2.24 | 2.05 | 1.95 | 2.10 |
|----------------------|------|------|------|------|------|------|------|------|------|------|------|------|------|------|------|
| Achieved Atytianment | 1.96 | 2.05 | 1.98 | 1.78 | 1.83 | 1.15 | 1.27 | 1.60 | 1.51 | 1.60 | 1.60 | 1.91 | 1.83 | 1.75 | 1.59 |

Overall Attainment Vs Planned Attainment POs and PSOs for **BTech Information Technology Program** 2019-2023 1 2.50 15 00 14 3 50 1.00 13 0.50 0.00 5 12 11 10 9 8 Planned Attainment Achieved Atytianment

Table 2.8.5: Overall Attainment comparison with planned values

Figure 2.8.1: Visual analysis of the attainment values

2.9 EVALUATING THE PEOs

Evaluation of PEOs can be performed after by obtaining the feedback from the Alumni on Program Education objectives after 2 to 3 years of graduating from the program to understand the attainment of Program Educational Objectives and accordingly corrective measures and program level for further finetuning the processes KUMAR

Hindustan College of Science & Technology (064)

Department of Information Technology STUDENTS INFORMAL ATTAINMENT FEEDBACK FORM

Subject Name with code: Operating System (KCS401)

Course Name: B. Tech IV Sem (IT)

| Student Name | : |
|--------------|---|
| Section | : |

University Roll no. :

<u>Note:</u> Kindly rate yourself in the scale of (1,2,3) as indicated below:

- : 1 for least able to answer
- : 2 moderately able to answer
- : 3 strongly able to answer

MARK MICK APPROPRIATELY.

| Course O | utcome (CO) | Bloom's Knowledge Level (F | KL) | |
|----------|--|--------------------------------|--------|--|
| CO 1 | Understand and classify operating systems based on their fund | ctions and list the components | КJ | |
| 01 | of an operating system. | | K2 | |
| CO 2 | Understand concurrent processes and demonstrate how to | solve classical problems in | K3 | |
| 02 | concurrency using synchronization mechanisms. | | | |
| CO 3 | Analyze and Evaluate CPU scheduling algorithms, analyze t | heir performance criteria, and | K2 K4 | |
| 0.05 | describe deadlock prevention, detection, and recovery mechan | isms. | K2, K4 | |
| | Understand and assess memory management techniques | and discuss virtual memory | | |
| CO 4 | concepts, and solve problems related to paging, segment | ation, and page replacement | K2, K3 | |
| | algorithms. | | | |
| CO 5 | Understand I/O management techniques, compare different di | sk scheduling algorithms, and | K2 K1 | |
| 005 | discuss file system organization, implementation, and security | • | K2, K4 | |

Course Outcome (CO1)

Ques. A) Can you explain the different types of operating systems based on their functions and provide examples for each type?

FEEDBACK: $\Box 1 \quad \Box 2 \quad \Box 3$

Ques. B) Do you know how the components of an operating system, such as the kernel, file system, and device drivers, work together to provide an environment for executing programs? FEEDBACK: $\Box 1 \quad \Box 2 \quad \Box 3$

Ques. B) Can you understand and classify operating systems based on their functions and list the components of an operating system.? FEEDBACK: $\Box 1$ $\Box 2$ $\Box 3$

Course Outcome (CO2)

Ques. A) Can you explain the concept of concurrency in operating systems, and why is it important? FEEDBACK: $\Box 1 \quad \Box 2 \quad \Box 3$

Ques. B) Do you know how synchronization mechanisms, such as semaphores or mutexes, can be used to solve classical concurrency problems like the "producer-consumer problem" or the "dining philosophers" problem"?

FEEDBACK: D1 D2 D3

Course Outcome (CO3)

Ques. A) Can you compare different CPU scheduling algorithms, such as First-Come, First-Served (FCFS) and Round Robin and able to discuss their advantages and disadvantages in terms of performance criteria like turnaround time and response time.

FEEDBACK: $\Box 1$ $\Box 2$ $\Box 3$

Ques. B) Can you explain the concept of deadlock in operating systems and how can deadlock prevention, detection, and recovery mechanisms help in handling deadlock situations? FEEDBACK: $\Box 1 \quad \Box 2 \quad \Box 3$

Course Outcome (CO4)

Ques. A) Do you know and able to describe the concept of virtual memory and its advantages in operating systems.

FEEDBACK: $\Box 1$ $\Box 2$ $\Box 3$

Ques. B) Given a scenario with a specific page replacement algorithm, such as Least Recently Used (LRU), Can you solve a problem related to page replacement by determining the page faults and the resulting page table changes?

FEEDBACK: $\Box 1 \quad \Box 2 \quad \Box 3$

Course Outcome (CO5)

Ques. A) Can you explain the different I/O management techniques used in operating systems, such as polling, interrupts, and DMA with their advantages and disadvantages. FEEDBACK: $\Box 1 \quad \Box 2 \quad \Box 3$

Ques. B) Can you compare different disk scheduling algorithms, such as FCFS, SSTF, and SCAN and also analyze their performance criteria and provide examples to illustrate their behaviour. FEEDBACK: $\Box 1$ $\Box 2$ $\Box 3$

UPADHYAY Location Date: 20 Appendix-2: Question paper format representing CO number for each of the questions

Hindustan College of Science & Technology (064) Department of Information Technology <u>Class Test-1 (CT-1)</u>

Subject Name with code: OPERATING SYSTEMS(KCS-401) Sem. /Section: 4th Sem (IT-A) Max Marks: 30

Time: 01:30 Hrs.

Course Name: B.Tech. (IT)

Course Outcomes (COs):

At the end of the course the student should be able to:

- 1. CO-1: Understand and classify operating systems based on their functions and list the components of an operating system.
- **2.** CO-2: Understand concurrent processes and demonstrate how to solve classical problems in concurrency using synchronization mechanisms.
- **3.** CO-3: Analyse and Evaluate CPU scheduling algorithms, analyze their performance criteria, and describe deadlock prevention, detection, and recovery mechanisms.
- **4.** CO-4: Understand and assess memory management techniques and discuss virtual memory concepts, and solve problems related to paging, segmentation, and page replacement algorithms.
- 5. CO-5: Understand I/O management techniques, compare different disk scheduling algorithms, and discuss file system organization, implementation, and security.

| Q. No. | Question | Marks | со | Bloom's Knowledge Level (KL) |
|-----------|--|------------|--------------|--|
| | Section A Attempt <u>All</u> the parts (No Choice) | (6X1 | = 06) | |
| A1 | Which OS component is responsible for "Managing drivers for specific hardware devices"? | 1 | 1 | К1 |
| A2 | Define the following: (i) SMP (ii) POST | 1 | 1 | K1 |
| A3 | Discuss the Von-Neumann principle. Where it is applicable? | 1 | 1 | K1 |
| Α4 | Which of the following is not true? (Multiple options may be correct) a) kernel is the program that constitutes the central core of the operating system b) kernel is the first part of the operating system to load into memory during booting c) kernel is made of various modules which cannot be loaded in running operating system d) kernel remains in the memory during the entire computer session | 1 | 1 | К2 |
| A5 | List the objectives of scheduling. | 1 | 2 | K1 |
| A6 | What do you understand by graceful degradation in OS? | 1 | 1 | K2 |
| | Section B Attempt <u>any 03</u> Questions from this section. | (| 3X5 =15 | 5) |
| B1 | Differentiate between Multiprogramming, Multitasking, and Multiprocessing OS with a suitable diagram. | 5 | 1 | К2 |
| B2 | Elaborate the concept of System Call? Explain any three system calls. Differentiate between System Call and Interrupt. | ₅ RA Kl | JĘE\ JMAR | Digitally signed by RAJEEV KUN DN: C=IN, O=Personal, Postal S=Uta-Pradesh, SERIALNUMBER=AA3E6C12CI F2B07E25E0DJ75887AJ0CA3 E03B9A3, CN=RAJEEV KUM Reason: 1 am we aumor 0 this c |
| | | UPA | DHY. | AY Location: your signing location h Date: 2023.09.06 16:51:45+05'3 Foxit PhantomPDF Version: 10.1 |

| | Briefly explain the Microkernel Architecture of OS with a | | | |
|-----|--|-----|----------|------|
| B3 | diagram. Also differentiate between Microkernel and Monolithic | 5 | 1 | К2 |
| | Architectures. | | | |
| D.4 | List some common file types in OS with their extensions, and | - | - | 144 |
| В4 | functions. Also, explain at least 05 attributes of a file. | 5 | 5 | KI |
| В5 | Which data structures serves as a central repository of information that the operating system uses to manage the process, and essential for implementing multitasking and time- sharing capabilities in modern operating systems. Explain with suitable diagram. Once the process is assigned to the CPU and starts executing, what are the possible scenarios that could occur and how OS deals with it? | 5 | 2 | К4 |
| | Section C Attempt <u>any 02</u> Questions from this section | | (2X4.5 : | =09) |
| C1 | How OS deals with Interrupt that occurs while it is running a process, explain with the help of suitable diagram. Differentiate between Trap, Interrupt & Polling. | 4.5 | 1 | К2 |
| C2 | Why it is called that program is a passive entity while the process is an active entity? Draw and explain the state transition diagram for the process. | 4.5 | 2 | К2 |
| C3 | Write short note on: a) Disk based systems b) Blocking c) Free Space Management | 4.5 | 5 | K1 |

Appendix-3: First page of the Answer sheet for recording the CO level marks form

Appendix-4: Informal Feedback on POs and PSOs

Hindustan College of Science & Technology Farah, Mathura

(Affiliated to Dr. A.P.J. Abdul Kalam Technical University, Lucknow) 26 km milestone, Agra-Delhi Highway, Farah, Mathura – 281122 (UP)

DEPARTMENT OF INFORMATION TECHNOLOGY

| Level of | f Attainment of PSOs (Program Specific Outcomes) : Excellent (E) G | ood (G) | Average | (A) |
|----------|--|---------|---------|-------|
| S.NO. | PSO | (E) | (G) | (A) |
| 1 | Equip students with the latest IT knowledge and skills to tackle real-work challenges. | đ | | |
| 2 | Foster leadership, critical thinking, problem-solving, and communication skills fo IT careers. | r | | |
| 3 | Encourage entrepreneurship and innovation through research, start-up projects industry collaborations, and business skills. | • | | 6 - 3 |

Level of Attainment of POs (Program Outcomes): Excellent (E) Good (G) Average (A)

| S.NO. | PO | (E) | (G) | (A) |
|-------|---|-------------|-----|----------|
| 1 | Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and computing to solve Computer Science and Engineering related problems. | 1.194.1 - M | | 21000-0- |
| 2 | Problem Analysis: Demonstrate the ability to identify, formulate and solve engineering problems related to Computer Science and Engineering. | 3 | | 2 |
| 3 | Design / Development of Solutions: Demonstrate the ability to design, analyze and interpret data and implement solutions for software based real life problems. | | | |
| 4 | Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis, and interpretation of data, and synthesis of the information to provide valid conclusions. | | | |
| 5 | Modern tool usage: Create, select and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities related to Computer Science and Engineering with an understanding of the limitations. | | | |
| 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. | | | |
| 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development. | 8 | | |
| 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. | 8 | | |
| 9 | Individual and Team Work: Function effectively as an individual and as a member or leader to diverse teams, and in multidisciplinary settings. | | | |
| 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. | 6 | | |
| 11 | Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. | | | |
| 12 | Life-Long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. | | | |
